RE: Request for data supporting: Environmental Protection Technology Series report; EPA-660/2-73/035, dated April 1974. "Joint Construction Sediment Control"

Dear Sirs:

This report, which is available online, is part of the Environmental Protection Technology Series: Research Reporting Series conducted in the early days of EPA. This research was on a demonstration of a natural and agricultural region that was being converted into an urban community in Columbia, Maryland. " This report was submitted in fulfillment of Grant No. 15030 FMZ by the Water Resources Administration, State of Maryland, under partial sponsorship of the Environmental Protection Agency. Work was completed as of June 1973."¹

The original contractor, Hitman Associates, is no long in business. The State of Maryland could not find any of the data I am looking for, so I turn to EPA to request the following data.

In general all data collected before, during, and after the project used to develop the report conclusions and recommendations. For instance:

- Field data journals
- Monitoring data of performance of various erosion control practices
- Chemical sampling practices and results
- Chemical analyses
- Monitoring and sampling data
- Flow levels
- Grab sample data
- Rain gage data
- Gaging station data
- Sediment levels and analysis

Thank you,

Timothy R. Titus
